Thank you for purchasing our **Multi-Pels 10-20-10/8S**

This high phosphorus formula has the essential nutrients needed to grow vigorous plants. This fertilizer can be used on Gardens, Flowers, Shrubs, Hedges, Trees, New Lawns and Wildlife Food Plots high in legumes.

Listed below are guidelines for using Multi-Pel 10-20-10/8S.

1 Cup = 0.5 Lbs. 1 Quart = 2 Lbs. 1 Gallon = 8 Lbs.

NEW LAWN: Prior to laying down sod or seeding, apply and incorporate preplant 10 lbs per 1000 square feet. If the grass is already established, topdress and water in 7-10 lbs per 1000 square feet.

GARDEN: In the spring apply and incorporate just before planting 15 lbs per 1000 square feet of Multi-Pels 10-20-10/8S Fertilizer. Topdress and water in another 5-7 lbs per 1000 square feet of Multi-Pels 10-20-10/8S four to five weeks later on high nitrogen crops such as corn, potatoes, and onions. However, **do not** topdress your tomatoes, squash, watermelons, and especially beans.

FLOWERS, SHRUBS AND HEDGES: Apply 1 pound per 100 square feet (10 X 10 feet) and for flowers work well into soil before planting. Apply an additional 1 pound per 100 square feet every 3-4 months, mixing lightly with topsoil, making sure not to disturb the roots. Water thoroughly after each fertilizer application.

SHADE TREES and/or FRUIT AND NUT TREES: For an under the tree limb surface fertilizer application, apply 0.5 pound per inch of the trunk's diameter. Measure the trunk diameter five feet from the ground. Apply this fertilizer rate in early spring and again in late summer. However, fertilizer is more available to tree roots when applied deep in soil. For this method of application make holes with a crow bar or some pointed object at 3-4 foot intervals in a ring around the tree at the edge of the branches and apply 1/2 cup of fertilizer per hole. With this deep fertilizer application, apply fertilizer only in the spring.

WILDLIFE FOOD PLOTS: Apply PREPLANT! INCORPORATED! 500-600 lbs. per acre. For small plots use 15-20 lbs per 1000 square feet.
